

MAKE A DIFFERENCE

Blueline Power has developed a solar electric kit for relief workers and families in the developing world. It is easy to set up and maintain, and unlike many other solar products, it is also easy to transport. The places where electricity is most needed are usually off the beaten path, and a solar system that fits in a suitcase and deploys in a day can perfectly meet the needs of the rural poor and aid workers. Lack of electricity is a critical barrier keeping the poor in poverty. Blueline Power and the Developing Nations Kit are working to break that barrier.

DNK addresses Problems

- ❑ Over 2 billion people lack access to electricity. For many who have it, it is unreliable and possibly dangerous.
- ❑ Natural disasters displace millions and destroy existing electrical infrastructure
- ❑ Thousands of deaths are preventable with deployment of proper electrification technology
- ❑ Lack of electricity denies rural communities basic infrastructure for education, medical care, night lighting, communication, and business
- ❑ Relief organizations operate without proper equipment

The DNK provides electrification anywhere in the world

DNK Applications for United Nations millennium goals

- End Poverty

Can power tools for business in the developing world, like cell phones, computers, sewing machines, water pumps, water purifiers, and rechargeable battery powered hand tools

- Universal Education

Can power computers in schools, allowing access to internet educational programs

- Child and Maternal Health, combat HIV/AIDS

Can power refrigerators for the storage of temperature-sensitive medicines, as well as lights for medical procedures

- Environmental Sustainability

Provides electricity that is clean and environmentally sustainable

- Global Partnerships

Can power communications gear enabling global partnerships

DNK can be scaled to meet specific needs

Portability is key—the best solar system in the world cannot help if it cannot be brought where it is needed.
